I wanted to create a very impressive thunder / explosion sound. This is an overdub of multiple thunders from my thunderstorm recording. I sounds really good in my ears. Have fun.

It's night, it's raining, it's pleasant 20 degrees C and I am standing on my front veranda with an R-09 connected to a Rode NT4. I am trying to record the rain-drops on the veranda roof (it's tin). A car drives past so I quickly point the mic at the street. You can hear the tyres on the wet road...not long after the car passes a neighbors dog decides the car sucks. WOOF!

This recording was made on the 12.05.2004, using the Soundman OKM II with the Sony portable DAT recorder TCD-D7 and the SBM-1 (Super Bit Mapping) from Sony, in a forest called the Bueckeberg near Minden/Germany. A light rain on the leaves, plus a few birds can be heard in this short recording. Fade in/out was used on this track, but no filters.

This work is licensed under the Attribution License.

church bells rain 6 6 06.wav

★★★★★ (91)

Ionizing

June 7th, 2006

Rode NT4 mic with a Rycote wind muff on (slight attenuation of the higher frequencies is noticeable to my ears) sitting on a chair under an awning on my porch. I hit record slightly too late to catch the first couple of bell rings, but got most of it. First we hear the church signal 8pm, then we hear the courthouse do the same thing. Also some wind in the trees right above the mic, some rain, a bit of thunder, and some cars in a small town. Also a huge truck with loud engine that sounds almost like thunder towards the end, in fact it was mixed with thunder at one moment. Captured with maudio delta1010LT soundcard.

My front veranda roof is tin and it was raining so I stood under it holding a Rode NT4 mic in close proximity to the underside of the roof. Filtering this sound will change the perceived roof type. This is a stereo recording. The NT4 was connected to an Edirol R-09 mic-in (15 level setting).
