[Download](#)

The sound of a very gentle sea lapping onto a shallow hard-packed sloping beach. Recorded from approximately 1 meter at a 45 degree angle pointing at the waters edge. The tide was in (if you are wondering why the Geotag seems to be far away from the water). In the distance a small boat is motoring. Recording chain: Rode NT4 (stereo mic) - Sound Devices MixPre (pre amp) - Edirol R-09 (16 bit 44.1 kHz).

A fine stereo recording -in my opinion, of the North Sea in Denmark on a warm summerday last year. Nothing else just waves. Recorded with my SP-BMC-12 Sound Professionals Binaural Microphones and a minidisc. Very nice with headphones -good for relaxing and calming the mind :-)

This work is licensed under the Attribution License.

A half mile into the woods is a small clearing. The clearing is created by a large area of granite, upon which vegetation can not grow. There is a small stream that starts at the top of the granite swath. The water flow changes many times before leaving the granite for more vegetation. This is a close-up recording of water flowing quickly over a bump of rock, which occurs near the top of the granite slab. Recorded with a Zoom H4 on 25 July 2007 near Rosendale, NY, USA.

Sound created for the Earth+Wind+Fire+Water contest recordings of some water bubbles running smoothly varying pitch and time, equalisation, panning and presence to each one a bandpass filter was used fo the entire group Then gently phased for add that liquid deepness feeling. Small amount of delay and a touch of reverb. Planned as a score sequence, is an ttempt to recreate an immersion in a liquid world (like the Earth ;)
